EDUCATION

George Mason University

Fairfax, VA

Bachelor of Science in Computer Science

Expected December 2026

Selected Coursework: Software Engineering, Data Structures, Operating Systems, Computer Networks, Secure Programming, Mobile Application Development, Database Concepts

EXPERIENCE

The Global Career Accelerator | *Coding for Web Trainee*

Remote | Spring 2025

- Built and improved responsive web experiences using HTML, CSS, Bootstrap, and JavaScript; used developer documentation to troubleshoot code and deliver functional features.
- Integrated third-party APIs, applied UX research and prototyping concepts, and collaborated with a global team to complete technical development tasks.

PROJECTS

Original Document Return Request (ODRR) | Java 21, Jakarta Servlets, MySQL, Maven, JUnit 5

Fall 2025

- Collaborated on a multi-role document-request web application; implemented data-entry and reviewer interfaces plus queue controls that load selected request data into review workflows.
- Added JUnit tests and debugged application and database behavior involving reviewer notes, request queues, and state handling within a Maven and Checkstyle development workflow.

UnStack Inventory App | Java, Android SDK, Firebase, PostgreSQL, Google Maps

Spring 2026

- Collaborated on a two-person Android inventory-management application supporting authentication, stock updates, restock requests, role-based workflows, and supplier-location lookup.
- Worked with Firebase Authentication, Firebase Data Connect, PostgreSQL, Google Maps SDK, Gradle, and Android Studio to build and test backend-connected application flows.

Reliable UDP Transport | Python, UDP, Socket Programming, CRC32

Spring 2026

- Built with a teammate a reliable file-transfer protocol over UDP using sequence numbers, a sliding window, acknowledgments, retransmissions, and CRC32 integrity checks.
- Handled duplicate and out-of-order packets and tested behavior under simulated packet loss and corruption, using sender and receiver logging to diagnose protocol behavior.

DNS Client | Python, UDP, Binary Protocol Parsing

Spring 2026

- Built with a teammate a DNS client that manually constructs UDP query packets, validates transaction IDs and response flags, parses IPv4 A records, and retries timed-out requests without relying on a high-level DNS lookup library.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL, JavaScript, HTML, CSS

Frameworks & Platforms: Android SDK, Android Studio, Jakarta Servlets, Firebase Data Connect, Bootstrap, JUnit 5, Maven, Gradle, Tomcat

Databases & Tools: MySQL, PostgreSQL, Git, GitHub, GitLab, Linux/UNIX

Networking & Development: TCP/IP, UDP, DNS, Socket Programming, API Integration, Debugging, Testing, Developer Documentation
